- Global support services

TOPCALL and IBM present customers with business-to-business communications for MQSeries. You have the business applications... we have the plug and play integration with fax, Internet mail, voice, IVR, WAP and more.

IBM MQSeries + *one* = E-Business success

One Business-to-Business Solutions

All business applications are connected to the *one* communication source. Whether the business sends fax from AS/400, e-mail from UNIX, automated voice calls or telex from an in-house application, *one* does it all. Communications are driven to and from the desktop, within any MQSeries-enabled application. MQSeries is connected business-to-business.

One Complete Connection

The *one* interface is plug and play for business communications. The standard interface makes sending and receiving messages to and from any application easy. Whether the business operates with different flavours of Unix, NT, or mainframes, all are communication-enabled with the Communication Server *one*.

One Secured Transmission

one utilises the secure query functions of MQSeries to guarantee point-to-point delivery of records and messages. Confirmation notifications are customised. Send a fax from Unix and get the confirmation back in Lotus Notes. Or create an event to notify the administrator via SNMP.

One Enhanced Connectivity

one enhances connectivity to e-Commerce solutions and business applications. Integrate IVR (interactive voice response) with business applications, WAP with your mobile commerce or Unified Messaging with your entire messaging infrastructure.

One Turnkey Setup

The *one* connection to MQSeries is plug and play for business communications. Our turnkey approach delivers value to the customer. TOPCALL takes complete end-to-end responsibility to guarantee business success. Our global support services set-up, customise and maintain your business communications.

A Winning Combination
